PROFILE

Database professional with experience at ICAN Engineering Group (2018-2022), focused on SQL Server administration, T-SQL, database tuning, maintenance and application support. Combines practical business systems experience with a master's degree in Computer Science and applied research in machine learning for intrusion detection.

CORE SKILLS

Databases: SQL Server, T-SQL, SQL queries, stored procedures, query optimization, performance monitoring, maintenance plans, backup and recovery, MySQL.
Analytics: Power BI, DAX, Power Query / M, Tableau, SSIS / C#, data extraction and reporting.
Systems and delivery: IIS, Windows Event Viewer, troubleshooting, workflow analysis, implementation coordination and user training.

PROFESSIONAL EXPERIENCE

Database Administrator | ICAN Engineering Group | 2018-2022

Managed and tuned customer SQL Server databases, defined maintenance plans and developed T-SQL scripts. Supported IIS environments and office automation implementations. Analysed customer workflows, forms and reports; trained groups of up to 400 users per training period.

Project Manager & Database Developer | Hormozgan water utility | May-Aug 2021

Created Power BI dashboards for operational analysis and management reporting, using DAX and T-SQL. Coordinated project delivery and database development.

Freelance Shopify Support | Oro Jewels | Oct 2024

Supported a Netherlands-based jewellery website through code changes, troubleshooting, maintenance and feature enhancements, including performance and SEO-related updates.

EDUCATION

Master's in Computer Science | University of Florence, Italy
Cybersecurity focus; research in vertical federated learning and intrusion detection.

Bachelor of Software Engineering | Islamic Azad University, Bandar Abbas | 2014-2017

SELECTED PROJECTS

Intrusion detection research: ToN-IoT and UNSW-NB15; autoencoder representations, Neural VFL, shared and heterogeneous encoders, zero masking and mean imputation. Compared SVM, XGBoost, LightGBM, CatBoost and MLP with centralized baselines; evaluated precision, recall, F1 and confusion matrices.

Personal Spending Tracker: Java 17 / Swing expense application with MongoDB and layered UI, controller, service and repository architecture. Repository documents JUnit, Mockito, AssertJ Swing, Testcontainers, Docker, Maven, JaCoCo, PIT, GitHub Actions and SonarCloud.
